

Statement of Commitment to Environmental Sustainability

Barry Nilsson is committed to environmental sustainability and to reducing the environmental impact of our operations in a transparent, measurable and accountable way.

As a national legal practice, we recognise the role professional services firms play in supporting the transition to a low-carbon, climate-resilient economy. We acknowledge that our environmental footprint arises primarily through energy use, business travel, and our supply chain, and we are committed to actively managing and reducing these impacts.

Our commitments

We commit to:

- **Reducing our greenhouse gas emissions**
We have established a Net Zero pathway aligned to recognised standards and are actively working to reduce emissions across our operations and value chain.
- **Using renewable energy and improving efficiency**
We prioritise renewable energy and energy-efficient practices across all offices.
- **Managing environmental impacts across our operations**
Including reducing waste and encouraging sustainable work practices.
- **Responsible procurement and supplier engagement**
We consider environmental factors in our procurement decisions and work with suppliers to support improved environmental outcomes.
- **Transparent measurement and reporting**
We measure our environmental performance annually and report on our emissions, progress and priorities through our Sustainability and Emissions reporting.

→ Governance and accountability

Environmental performance, climate-related risks and emissions reporting are overseen by the Board of Management, with our Responsible Business team responsible for implementation and performance monitoring.

Continuous improvement

We are committed to continuous improvement in our environmental performance and to aligning our approach with evolving regulatory requirements, client expectations, and leading practice.

Further information, including our Environmental Policy, Net Zero Plan and sustainability achievements, is available on our website.
